

TG Systems UK

St. Adrian's School

Case Study

Challenge:

St Adrian's required a modern display solution to enhance both classroom teaching and larger group presentations. The project involved installing a large 86" screen for shared spaces, alongside a smaller interactive display to support everyday classroom learning.

Solution:

TG Systems supplied and installed both displays, creating a flexible digital environment suited to a range of teaching scenarios. The 86" screen delivers a strong visual impact for assemblies and group sessions, while the classroom display supports interactive, engaging lessons. The result is a reliable, future-ready setup that improves visibility and encourages collaboration.
